- Cumplir con las regulaciones establecidas para el uso del cannabis medicinal.

THE TECHNOLOGY BEHIND THE SMOKE CABIN

<https://www.smokesolution.com/>

1-2 In order to create a smoke free environment, it is necessary to capture the smoke before it leaves the cabin and due to our judicious system, the smoke goes in the desired direction and through our very efficient filtration.

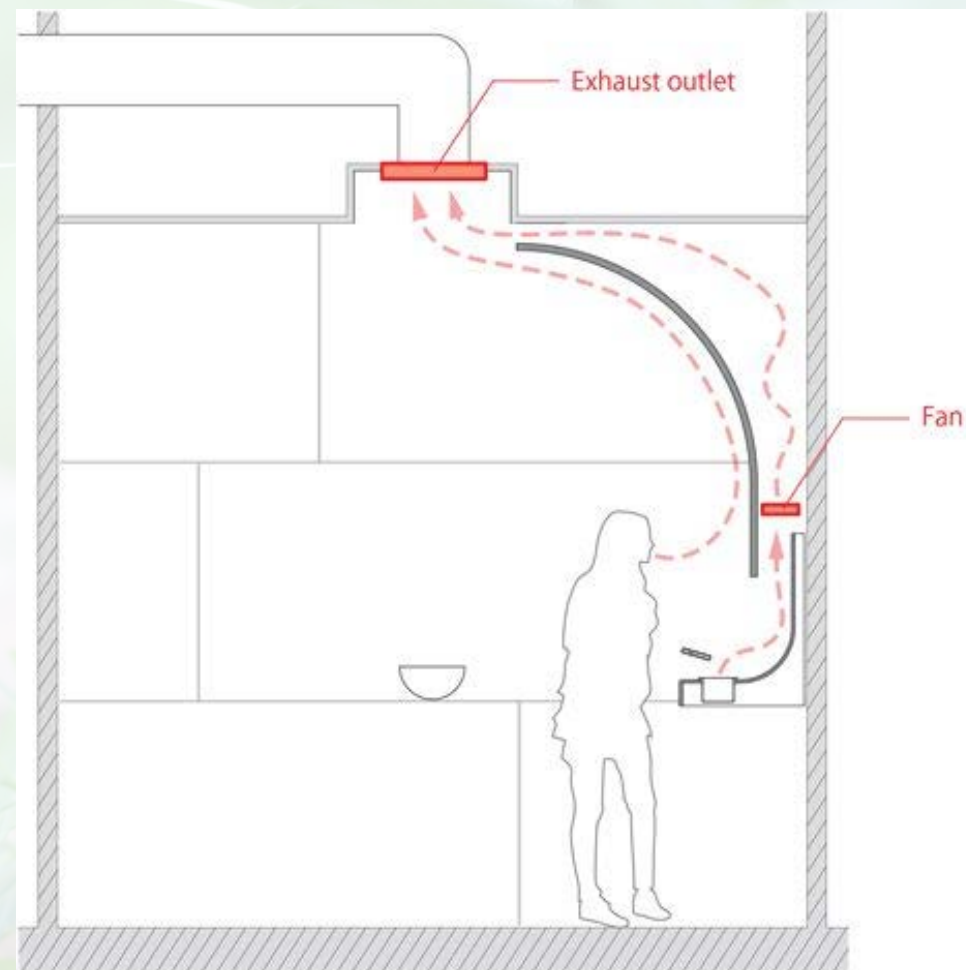

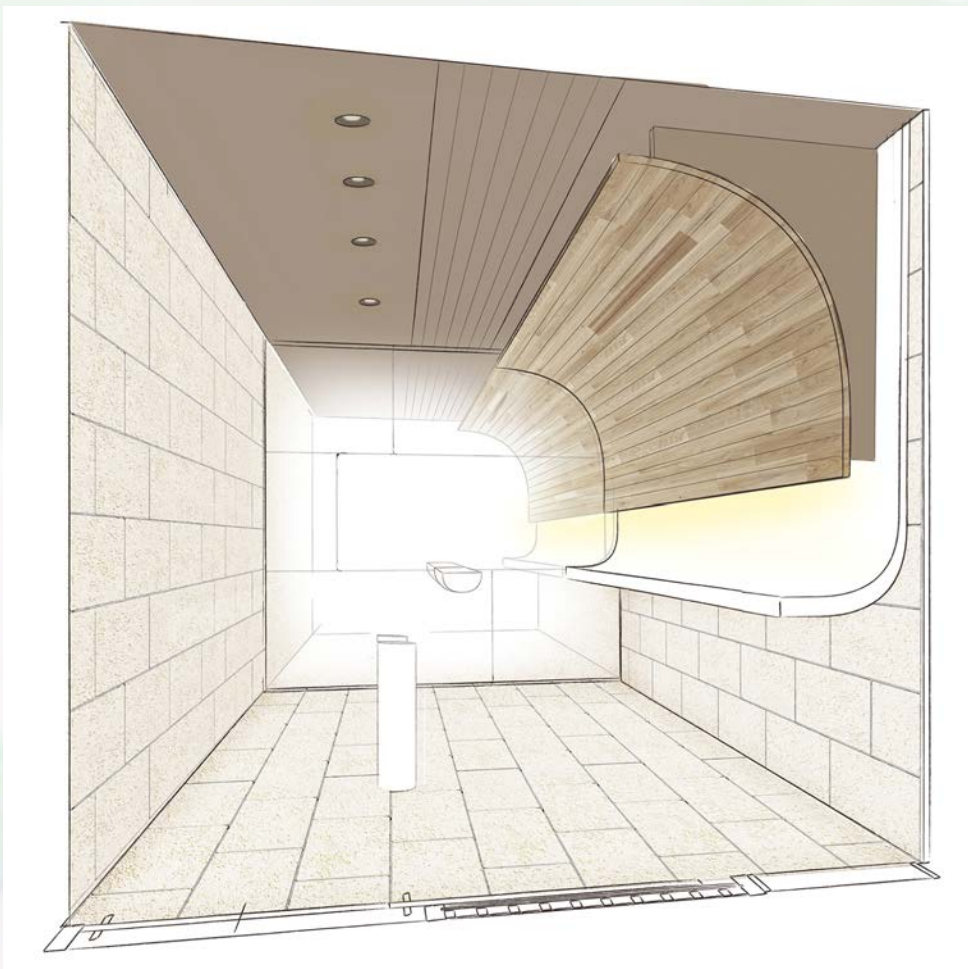

2-3 Our filtration system ensures that even the smallest particles are eliminated. The smoke cabin's design makes it possible for the gases and particles from tobacco smoke goes through the filter and comes out as clean, healthy breathable air. The pollutants remain trapped in the filters. Regular maintenance guarantees that the system is running smoothly and effectively.

4 The certified, fireproof and odourless ashtray in aluminium contains the disposal of ash and cigarette ends.
