

PUERTO RICO

**TELECOM**

CONFERENCE 2011

**THE NEW FUTURE**

**Mr. Francisco (Paco) Muñiz, PE, RCDD**  
Vice President of Business Solutions, WorldNet Telecommunications

Francisco Muñiz possesses a vast experience in the telecommunications industry - and his diverse work experience has given him a breadth of knowledge that encompasses both the technical and managerial aspects of the business.

Muñiz's career development has been closely intertwined with WorldNet's own evolution. His leadership was essential during two of WorldNet's most important growth phases: the transition from a reseller to a Competitive Local Exchange Carrier in the early 2000's and the construction and deployment of the company's own network in 2006.

In this last milestone, Muñiz not only oversaw the project, but he was also in charge of the design, construction and deployment of the network. This included the selection of equipment and vendors as well as the development of the technical and administrative infrastructure necessary to support the operation.

As a result of these successes, Muñiz was named General Manager of the company. In this new capacity, he continued strengthening WorldNet's technical and financial situation. From 2007 to 2010, Muñiz was responsible for the migration of thousands of customers from PRTC's network to WorldNet's Telecommunications Network, a measure that not only gave more operational control to the Company, but also increased operational margins.

His recent designation as VP of Business Solutions reflects WorldNet's realignment as a technological company that sees itself as more than a telecommunications provider, but also as a business partner that can support its customers achieve their goals.

Muñiz, an Industrial Engineer (Mayaguez, UPR), is also a licensed Professional Engineer (PE) and a Registered Communications Distribution Designer with an Outside Plant Specialty (RCDD/OSP).
