

The Puerto Rico Chamber of Commerce  
and it's Health Committee present the

PUERTO RICO  
**Health & Insurance**  
CONFERENCE 2022

# Clinical Value – Based Care Models

**Víctor M. Ramos Otero, MD,MBA**  
President

Puerto Rico College of Physicians and Surgeons

# COVID – 19 and Healthcare System

Nowadays we have a healthcare system based on the **compromise** and **performance** of the medical professionals, despite of the unsuitable payment received from the health insurance companies, the inadequacy of available tools from the government and some hospitals, IPA's owners and FQHC administrators.

# COVID – 19 as an endemic virus

An infectious disease should never remain present, our goal should be declaring them eradicated, like it happen with the smallpox.

Because transmission of this virus will persist in the community, it is essential to be prepared for management of its long-term sequelae.

# Value Base Models

Personally, this is the easiest part of this presentation because these models are not other than control mechanisms from the insurance companies to justify underpayment to healthcare professionals. An example of this will be an IPA, in which a physician work with a fix budget.

These healthcare models, that were designed to attract foreign companies who bought their participation at absurd prices, have resulted in physician's underpayment, taking into consideration that reimbursement is below those established by CMS.

# Thank you
