& Research Trust

Startups participantes:

1. **Abacrop** - Abacrop is an agricultural data capture solution that was created to increase production and expansion capabilities.
2. **Lank** - Lank enables users to share digital subscriptions safely. While the subscription economy has grown 6x in the last 9 years, sharing subscriptions has become a trending topic since Netflix started having trouble on their economics. In the actual inflationary context, users need to share in order to have access at a lower cost. Lank not only has higher retention rates, it is also a great solution against the illegal accounts' reselling market.
3. **Red Atlas** - Atlas is a real estate search engine for emerging markets based in San Juan, Puerto Rico. Red Atlas conducts expansive, ongoing data collection and verification to produce and maintain a comprehensive database that serves as the central nervous system for real estate information in the markets that we serve.
4. **Channel** - Channel is an AI-powered marketing automation platform that helps small business owners who don't have enough time to run their own marketing campaigns or lack the budget to hire agencies or freelancers.
5. **eSponsor** - eSponsor is the easiest way to create a mobile page with monetization tools for content creators and influencers.
6. **Wihom** - La nueva forma de poner en automático tu conciliación de pagos. Somos una herramienta para crear integraciones y automatizaciones de flujos de trabajo que conectan diferentes procesadores de pago y software contable o ERP.
7. **Figuro** - Figuro is the first fully digital personal shopper for all individual insurance in LATAM.
8. **CelerOps** - CelerOps enable organizations to be more productive by automating administrative tasks without changing current systems.

Their automations improve processes to be 15X faster and 5X cheaper than the manual operation.

9. **Terra Firma** - TerraFirma is a one-stop digital solution designed to help scientists and engineers gather data 30x faster to accelerate the study of climate change and environmental hazards.
10. **RunFalcon** - RunFalcon is a cloud based, codeless, on demand automated performance testing platform that allows development teams to check the response time, throughput, resource usage, and scalability of software under a certain workload by leveraging automation. Using RunFalcon, your software will provide the best customer experience while saving money for fixing problems at the right moment
